

RollPlate® MANUAL STAR SAND #400 & #800

Manual Sandblasting
Tool for Angle Grinders

Easy to use and light weight tool

About

The sandblasting system Rollplate® Manual Star Sand is a manual sandblasting tool that lets you sandblast natural stone surfaces (marble, limestone, granite and quartz), also allow you to create non-slip strips.

This tool has a universal M14 socket which can be adapted to most angle grinders that have this type of socket. The coating used in the sand rollers manufactured by Iberdin®, is composed of high quality tungsten carbide , which allows them to have a high performance and therefore great resistance to wear.

Its rollers are easy to replace with the possibility of changing the finish by choosing a type: bush hammered or sanded.

The Rollplate® Manual Star model comes with 3 types of adjustment in the fitting for the supports with the rolls, which allows you to choose to place the rolls on the outermost part of the plate (bigger area of work), or turn them inwards, to be able to work in a smaller area.
